

# **LiPo Battery Charge Rates**

**Due to the restricted level of mains power available on site, we are having to limit the permitted charge rate for anybody using the clubs power supply to a maximum of 8 amps.**

**Should you wish to charge at a higher rate then you must supply your own power i.e. 12v Leisure Battery. All non-gel lead acid batteries MUST be placed within a plastic tub to contain any acid spillage**

**NO power supply cables will be permitted to be fed in (i.e. from a generator) or out of the pitting cabin**

**At ALL club venues, there is a firm rule that LiPo packs MUST be charged in a recognised LiPo sack, bag or coffin.**

**The club has a clamp meter and random checks will be taking place at all events.**

**Anybody found to be exceeding the rates stated above or not charging packs in a recognised LiPo sack, bag or coffin will be asked to leave the venue immediately.**
