

Stafford RCMCC

Truck (Semi's) Rules

1. Electric 1/10 Tamiya TT01 or TT01e chassis only to fit in with the ICONIC Series.
2. 6 cell 7.2v NiMH or HARD CASE 2 cell 7.4v LiPo batteries ONLY
3. Batteries must be charged/discharged in accordance with the manufactures instructions and with a charger approved for the cells involved.
4. Lipo cells MUST be charged/discharged in an approved LiPo bag or coffin (we also recommend that NiMH cells are also charged within a LiPo bag or coffin.)
5. ALL trucks (semi's) MUST use the Team Powers Brushed Cup Racer 540 Stock Motor (Part No. TP-540B-94F)
6. Tamiya or Montech semi-truck shells ONLY. E.g. Tamiya Part No. 51601 or Montech Part No. MT007007
7. Any commercially available tyres except foams
8. Allowed hop-ups are any commercially available Aluminum Propeller Joint & Shaft, Metal Motor Mount, adjustable turn buckles, Ball Raced Bearings, Oil Filled Shocks & any standard 0.6MOD Spur/pinion Gears (Max FDR 5.11:1)

Due to issues that have been experienced in fitting the approved Team Powers motor and the truck body to other chassis we have now updated our rules to allow only the Standard Tamiya TT01 or TT01e 1/10 chassis. This setup would also be acceptable to run in the ICONIC series. Whilst the Tamiya kit truck tyres can be used however, as Stafford RCMCC run in all weather and conditions the use of any rubber tyre is permissible

As this is meant to be an enjoyable class we ask you all to adhere to the above rules. We have made them as basic and straight forward to stop any misinterpretation. Should you require any additional clarity please ask.
